

In-organoid image-based HCS through the scales: applications landscape

About the speaker

Dr Cutrona is currently Senior Scientist at the Faculty of Medicine – University of Bern (Switzerland) where she serves roles as independent in-organoid HCS consultant supporting the development of high-content microscopy workflows with tumour organoids.

Over the past ~5 years, she contributed to build cell- and organoid-based assays that provided effective solutions to both high-content and high-throughput image-based screening for applications spanning from nanotechnology and nanomedicine testing to translational oncology.

Meritxell B. Cutrona

Senior Scientist

Department for BioMedical Research
(DBMR) – Bern University Hospital
(Bern, Switzerland).
